

SHWETANK SINGH

Fullerton, CA | +1 657-681-8939 | shwetankbpl26@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

EDUCATION

California State University, Fullerton

Master of Science in Computer Science

– Relevant Coursework: Machine Learning, Advanced Algorithms, Modern Software Management, Software Architecture

Fullerton, CA

Aug 2024 – May 2026

Indian Institute of Information Technology

Bachelor of Technology in Computer Science and Engineering

Vadodara, India

Aug 2019 – Aug 2023

TECHNICAL SKILLS

Languages: C++, Python, Java, JavaScript, TypeScript, SQL

Frontend: React, HTML, CSS, Responsive Web Design

Backend: RESTful APIs, FastAPI, Flask, Node.js, Express.js, Microservices, Authentication

Databases & Warehouse: MySQL, PostgreSQL, MongoDB, Relational Databases, Data Warehouse Concepts

Cloud & DevOps: Google Cloud Platform (GCP), AWS, Docker, Linux, CI/CD, Git

Data Engineering: Data Pipelines, ETL, Data Ingestion, Data Transformation, Data Validation, Data Quality

Observability & Reliability: Logging, Monitoring, Distributed Tracing, Telemetry, Analytics, Debugging, Performance Analysis

Engineering: Data Structures, Testing, Documentation, Agile Development, Collaboration, Problem Solving, AI

EXPERIENCE

Software Developer

Aug 2023 – Jul 2024

We Win Limited

Bhopal, India

- Designed and maintained **data pipelines** supporting **data ingestion**, **data transformation**, and **data validation** workflows across backend systems
- Developed backend services in **Python** and Java to process **structured datasets**, business rules, and operational workflows
- Built and maintained **REST APIs** to support reliable communication across services and downstream application features
- Optimized **SQL queries** and relational database operations, improving response time and data retrieval efficiency
- Investigated and resolved **data quality issues**, application failures, and performance events using **debugging**, **logging**, and **monitoring**
- Designed, tested, and documented data workflows to improve **data quality**, reliability, correctness, and repeatability
- Responded to recurring system issues by identifying root causes and improving validation logic to reduce future failures
- Collaborated with engineers and business stakeholders to define requirements, clarify system behavior, and deliver scalable data solutions
- Maintained technical documentation for workflows, API behavior, troubleshooting steps, and implementation decisions

Software Developer Intern

Jan 2023 – Jul 2023

We Win Limited

Bhopal, India

- Developed **20+ API endpoints** supporting backend services, internal tools, and **structured data workflows**
- Implemented request validation, **data transformation**, and structured response generation for reliable API behavior
- Worked with **relational databases** to store, query, validate, and retrieve application data
- Created scripts and utilities to support testing, debugging, and repeatable data processing tasks
- Tested and debugged application components to identify edge cases, incorrect results, and system failures
- Supported troubleshooting of backend issues by reviewing logs, validating inputs, and isolating root causes

Software Developer Intern

May 2022 – Jul 2022

Voldemort With a Nose LLP

Hyderabad, India

- Built a **Python-based data processing tool** to automate multi-step workflow operations
- Designed reusable **transformation logic** capable of handling varying input structures efficiently
- Improved workflow reliability by reducing repetitive manual steps and standardizing processing behavior
- Documented reusable scripts and workflow behavior to support future modification and troubleshooting

PROJECTS

CodeGraph AI – Repository Analysis Platform

- Built and tested **data workflows** to ingest, transform, and analyze structured repository metadata
- Developed backend services in **Python** for structured analysis, reporting, and workflow automation
- Implemented **validation**, **logging**, and monitoring workflows to improve processing reliability and debugging
- Generated structured outputs from repository data to support analysis, visualization, and technical decision-making
- Focused on repeatable processing, data correctness, and clear documentation of backend workflow behavior

BCIRS – Blockchain-Based Crime Incident Reporting System

- Built structured workflows and backend APIs to support reliable **data movement** across system components
- Designed **validation logic** to maintain consistency and improve **data quality** across multi-role workflows
- Implemented state-based transitions to ensure correctness across report submission, review, and resolution flows
- Debugged synchronization issues across frontend, backend, and storage layers to improve workflow reliability
- Documented role-based workflows, API behavior, and system constraints for maintainability

Bird Species Classification using CNN

- Built **data preprocessing pipelines** for large image datasets used in model training workflows
- Validated dataset structure and improved preprocessing steps to reduce inconsistent inputs
- Developed scripts for experimentation, transformation, and analysis to support repeatable model workflows
